Zadar – then and now

(15 years later ...)

These days our branch office Zadar celebrated the 15th anniversary of doing business.

Not so long ago, in 2003, we embarked on the adventure that is still going on and that will, we believe, continue as long as another zero is added to our 15 years.

In 2003 we set, we may say so, on a barely known course to engage in dry construction and its advantages over classical construction; however, we were full of enthusiasm and positive energy.

Looking back at these 15 years, we are proud that sometimes we were a direct and at other times an indirect participant in the make-over of the line of sight of the town of Zadar as well as its surroundings, that we managed to make the buyers and contractors more familiar with the benefits and advantages of the dry construction system and that we introduced them into this magical world.

Dry construction with prefabricated elements offers many advantages. Gypsum construction material fully changes the standard forms, functions and elements of space planning.

B+M Team Rijeka

Since 1 October 1995, Baustoff+Metall PC Rijeka has been operating in the region of Kvarner, Istria, Gorski Kotar and islands (Krk, Cres, Lošinj, Susak, Ilovik, Unije, Pag) thus covering all of them with its commercial operations and logistics.

In the course of all these years, changes occurred ... in personnel ... technical ... logistical ... and they all were in response to the demands, situations occurring from time to time, in order to raise the quality of our offer, services and, finally, in order to increase the satisfaction of our business partners.

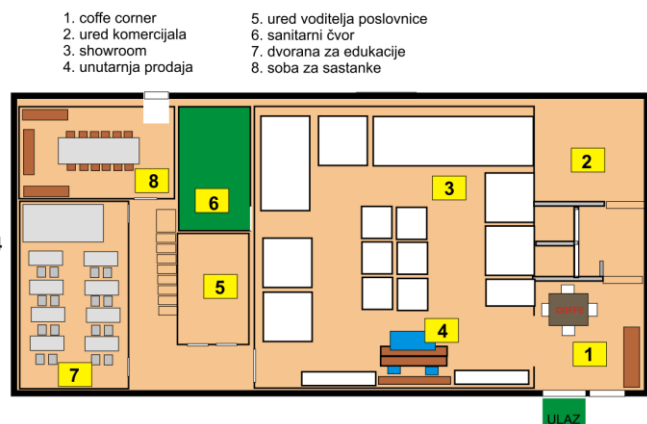

In the course of 2018, covering the region of Istria, Kvarner, Gorski Kotar and the islands by its position and assignment, Baustoff+Metall PC Rijeka made the region stronger by introducing a new employee in the commercial department - Vanja Piškulić.

Both professionally, with his commercial skills and experience, as well as with his human qualities - his sincerity and high spirits, Vanja found his position in the market among our customers, business partners.

We have the pleasure of seeing him develop professionally in the market of dry construction. Also we are glad to introduce another change in 2019 that will make our branch office Rijeka stronger.

KNAUF FIREWIN New System for Modern Challenges

As the leader in innovations in the global market of construction materials, in the recent decades Knauf significantly contributed to the development of dry construction based on plasterboards. Knauf solutions are the guarantee for high performance.

Dry construction became a synonym for quick, safe and quality construction both on the exterior and indoors.

For 50 years, we have been committed to the protection of people and residential facilities with our fire resistant Knauf systems. With our innovative products, professional advice and passion for efficient and cost-effective management of passive fire protection we are protecting human life and property.

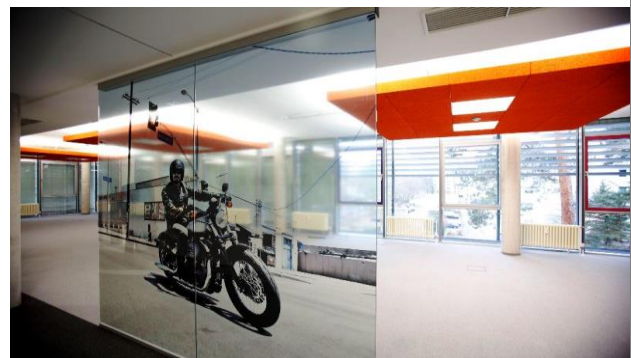

DON'T PANIC! – SECURED BY KNAUF FIREWIN

Knauf AMF – Heradesign – Acoustics and Design in Harmony with Nature

HERADESIGN acoustic solutions reduce disturbing background noise.

For a pleasant, positive room ambience it is not only important what we hear, but in particular what we feel.

For decades **HERADESIGN** has been dealing with the complexities of acoustics. In addition to the study of noise phenomena or acoustics, this for us means the development of sustainable acoustically optimized solutions as well. Acoustics is one of the most important factors affecting the health, mood and mental state of a person, even if the person is not aware of it.
